The Sixth Assessment Report #AR6

SIXTH ASSESSMENT REPORT

Working Group I – The Physical Science Basis

INTERGOVERNMENTAL PANEL ON CLIMATE CHANGE

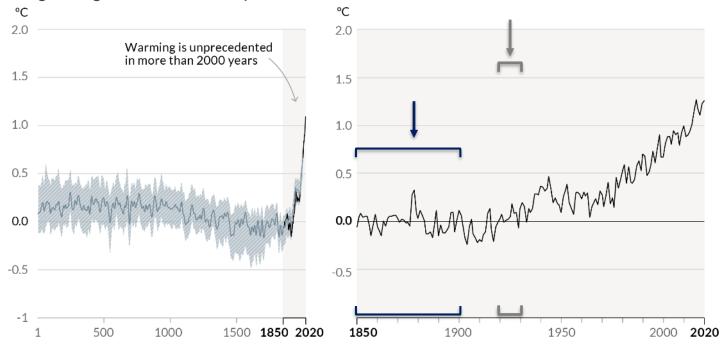

[Credit: NASA]

Recent changes in the climate are widespread, rapid, and intensifying, and unprecedented in thousands of years.

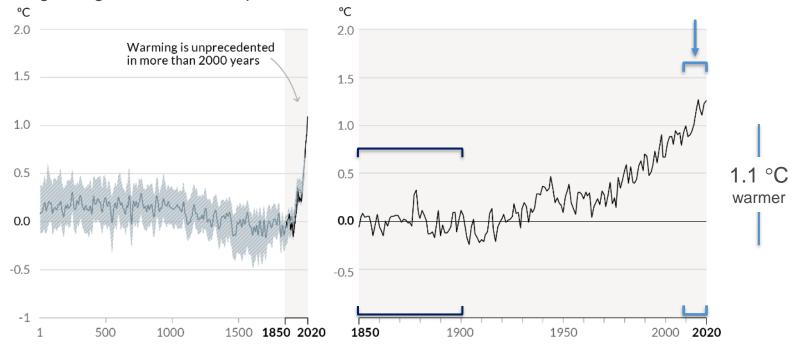

Human influence has warmed the climate at a rate that is unprecedented in at least the last 2000 years

Changes in global surface temperature relative to 1850-1900

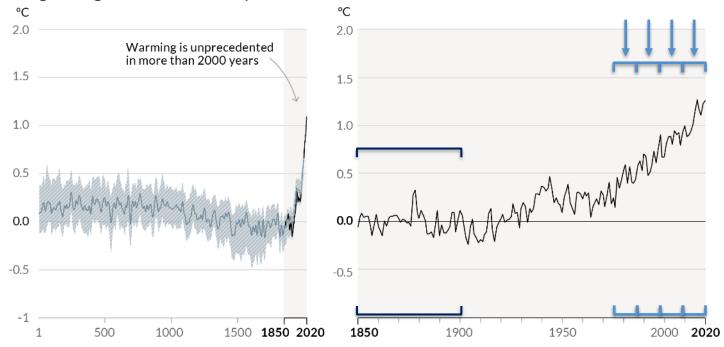

Human influence has warmed the climate at a rate that is unprecedented in at least the last 2000 years

Unless there are immediate, rapid, and large-scale reductions in greenhouse gas emissions, limiting warming to 1.5°C will be beyond reach.

It is indisputable that human activities are causing climate change, making extreme climate events, including heat waves, heavy rainfall, and droughts, more frequent and severe.

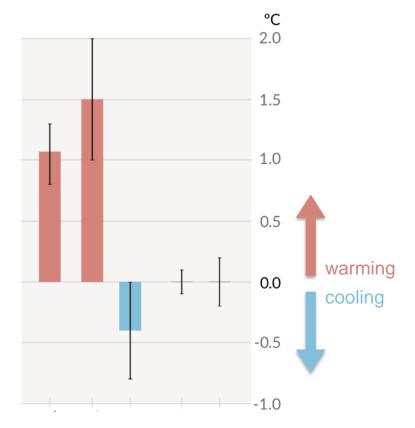

INTERGOVERNMENTAL PANEL ON CLIMATE CHANEE

INTERGOVERNMENTAL PANEL ON CLIMATE CHANGE

Observed warming is driven by emissions from human activities, with greenhouse gas warming partly masked by aerosol cooling

Climate change is already affecting every region on Earth, in multiple ways.

The changes we experience will increase with further warming.

However, some changes could be slowed and others could be stopped by limiting warming.

[Credit: evgeny-nelmin.]

To limit global warming, strong, rapid, and sustained reductions in CO_2 , methane, and other greenhouse gases are necessary.

This would not only reduce the consequences of climate change but also improve air quality.
