IPCC PRESS RELEASE

2 March 2020

IPCC opens second draft of Working Group I Sixth Assessment Report for government and expert review

GENEVA, 2 March – The Intergovernmental Panel on Climate Change (IPCC) has opened the second order draft of the Working Group I contribution to the Sixth Assessment Report (AR6) to government and expert review, marking the continued advancement of preparation in the flagship report.

The review runs from 2 March to 26 April 2020 and interested experts can register until midnight CET on 19 April at <https://apps.ipcc.ch/comments/ar6wg1/sod/register.php>.

IPCC reports go through repeated drafts and reviews to help ensure that the report provides a balanced and comprehensive assessment of the latest scientific findings.

The Working Group I contribution to the AR6, *Climate Change 2021: The Physical Science Basis*, will assess large-scale climate changes, climate processes and feedback and regional climate information.

During the review, experts may comment on the structure and comprehensiveness of the report and suggest improvements on the presentation of materials graphically or through tables. They may also propose revisions, relevant additional papers with full citation, and shorten text without losing relevant information. This version includes the first draft of the Summary for Policymakers.

IPCC reports undergo multiple stages of reviews, first by experts and then by both governments and experts. Experts who commented on the first draft will also be invited to comment on this second order draft. All expert reviewers will be acknowledged in the published report, due to be finalized in April 2021.

More information on the role of an expert reviewer is available in [Annex 1 of Appendix A to the Principles Governing IPCC Work](#).

Additional information explaining the Expert Review process is available here: https://www.ipcc.ch/site/assets/uploads/2017/08/AR6_WGI_FOD_Guidance_Note.pdf

Notes for editors

About the IPCC

The Intergovernmental Panel on Climate Change (IPCC) is the UN body for assessing the science related to climate change. It was established by the United Nations Environment Programme (now UN Environment) and the World Meteorological Organization (WMO) in 1988 to provide policymakers with regular scientific assessments concerning climate change, its implications and potential future risks, and to put forward adaptation and mitigation strategies. In the same year the UN General Assembly endorsed the action by the WMO and UNEP in jointly establishing the IPCC. It has 195 member states.

IPCC assessments provide governments, at all levels, with scientific information that they can use to develop climate policies. IPCC assessments are a key input into the international negotiations to tackle climate change. IPCC reports are drafted and reviewed in several stages, thus guaranteeing objectivity and transparency.

The IPCC assesses the thousands of scientific papers published each year to inform policymakers about the state of knowledge on climate change. The IPCC identifies where there is agreement in the scientific community, where there are differences and where further research is needed. It does not conduct its own research.

To produce its reports, the IPCC mobilizes hundreds of scientists. These scientists and officials are drawn from diverse backgrounds. Only a dozen permanent staff work in the IPCC's Secretariat.

The IPCC has three working groups: Working Group I (the physical science basis of climate change); Working Group II (impacts, adaptation and vulnerability); and Working Group III (mitigation of climate change). It also has a Task Force on National Greenhouse Gas Inventories that develops methodologies for estimating anthropogenic emissions and removals of greenhouse gases. All of these are supported by Technical Support Units guiding the production of IPCC assessment reports and other products.

IPCC Assessment Reports consist of contributions from each of the three working groups and a Synthesis Report. Special Reports undertake a shorter assessment of specific cross-disciplinary issues that usually span more than one working group.

About the Sixth Assessment Cycle

At its 41st Session in February 2015, the IPCC decided to produce a Sixth Assessment Report (AR6). At its 42nd Session in October 2015 it elected a new Bureau that would oversee the work on this report and Special Reports to be produced in the assessment cycle.

The Special Report on *Global Warming of 1.5°C* was released in October 2018, the *2019 Refinement to the 2006 IPCC Guidelines for National Greenhouse Gas Inventories* in May 2019, the Special Report on *Climate Change and Land* in August 2019, and the Special Report on *The Ocean and Cryosphere in a Changing Climate* in September 2019.

The three working group contributions to the Sixth Assessment Report will be released in 2021, and the Synthesis Report, integrating all the products in this assessment cycle, will be finalized in the first half of 2022.
