IPCC MEDIA ADVISORY

16 July 2021

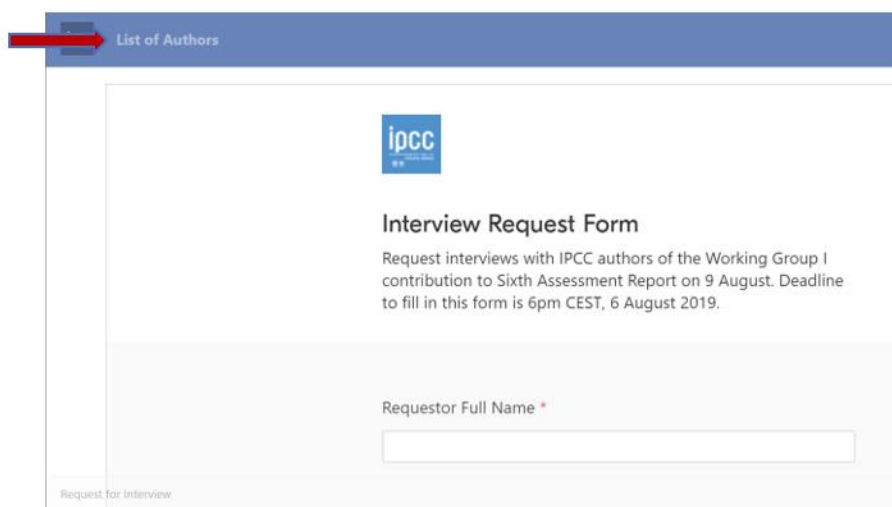

Interviews with authors of Working Group I contribution to Sixth Assessment Report

GENEVA, July 16 – Authors and Bureau Members of the Intergovernmental Panel on Climate Change (IPCC) will be available for interviews following the press conference to present the Summary for Policymakers of the *Climate Change 2021: the Physical Science Basis*, the Working Group I contribution to the Sixth Assessment Report. The press conference will be streamed live at **10.00 a.m. Geneva time (CEST) on Monday 9 August 2021**. Details on how to follow the livestream and will be issued closer to the time.

The interviews are expected to take place from around 12.00 noon CEST on 9 August. Due to the COVID-19 pandemic, all interviews will be conducted remotely.

Requests for interviews should be made using this [form](#).

Click on “List of Authors” on the top left of the form to see the list of experts available for interview. The list indicates the author’s country, field of specialization, and languages in which they can be interviewed.

Please complete all the fields relevant to your interview so that we are able to process your request according to your needs. You can indicate a preferred interview topic and the IPCC media team will use this information to assign a relevant author for you to interview.

Some of the IPCC experts receive more requests than can be accommodated following the press conference. To accommodate as many interviews as possible on the day, the IPCC may also suggest an alternative interviewee, based on the needs specified when completing the form.

Please note that only interviews arranged via this process will be considered as confirmed for 9 August. Any arrangements made directly with IPCC experts may be subject to cancellation. All interview requests should be submitted by **18.00 CEST on 6 August 2021**.

Notes for Editors

About the IPCC

The Intergovernmental Panel on Climate Change (IPCC) is the UN body for assessing the science related to climate change. It was established by the United Nations Environment Programme (UNEP) and the World Meteorological Organization (WMO) in 1988 to provide political leaders with periodic scientific assessments concerning climate change, its implications and risks, as well as to put forward adaptation and mitigation strategies. In the same year the UN General Assembly endorsed the action by the WMO and UNEP in jointly establishing the IPCC. It has 195 member states.

Thousands of people from all over the world contribute to the work of the IPCC. For the assessment reports, IPCC scientists volunteer their time to assess the thousands of scientific papers published each year to provide a comprehensive summary of what is known about the drivers of climate change, its impacts and future risks, and how adaptation and mitigation can reduce those risks.

The IPCC has three working groups: [Working Group I](#), dealing with the physical science basis of climate change; [Working Group II](#), dealing with impacts, adaptation and vulnerability; and [Working Group III](#), dealing with the mitigation of climate change. It also has a [Task Force on National Greenhouse Gas Inventories](#) that develops methodologies for measuring emissions and removals.

IPCC assessments provide governments, at all levels, with scientific information that they can use to develop climate policies. IPCC assessments are a key input into the international negotiations to tackle climate change. IPCC reports are drafted and reviewed in several stages, thus guaranteeing objectivity and transparency.

About the Sixth Assessment Cycle

Comprehensive scientific assessment reports are published every 6 to 7 years; the latest, the [Fifth Assessment Report](#), was completed in 2014 and provided the main scientific input to the Paris Agreement.

At its 41st Session in February 2015, the IPCC decided to produce a [Sixth Assessment Report](#) (AR6). At its 42nd Session in October 2015 it elected a new Bureau that would oversee the work on this report and Special Reports to be produced in the assessment cycle. At its 43rd Session in April 2016, it decided to produce three Special Reports, a Methodology Report and AR6.

The IPCC also publishes special reports on more specific issues between assessment reports.

[Global Warming of 1.5°C](#), an IPCC special report on the impacts of global warming of 1.5 degrees Celsius above pre-industrial levels and related global greenhouse gas emission pathways, in the context of strengthening the global response to the threat of climate change, sustainable development, and efforts to eradicate poverty was launched in October 2018.

[Climate Change and Land](#), an IPCC special report on climate change, desertification, land degradation, sustainable land management, food security, and greenhouse gas fluxes in terrestrial ecosystems was launched in August 2019, and the [Special Report on the Ocean and Cryosphere in a Changing Climate](#) was released in September 2019.

In May 2019 the IPCC released the [2019 Refinement to the 2006 IPCC Guidelines for National Greenhouse Gas Inventories](#), an update to the methodology used by governments to estimate their greenhouse gas emissions and removals.

The contributions of the three IPCC Working Groups to the Sixth Assessment Report are currently under preparation. The concluding Synthesis Report is due in 2022.
